

# Tangent Supports

## Tangent Supports

Standard Loop and Elongated Loop Tangent Supports are intended to protect and separate one-pair aerial wires on a common drive hook. They accomplish this in the safest, easiest way possible: just wrap them on and hang them up. Because they wrap on in seconds without tools, they keep installation expense down and provide long, trouble-free service at the lowest possible cost.

| Catalog Number       | Conductor Type              | Color Code | Units Per Carton | Wt./Lbs. Per Carton |
|----------------------|-----------------------------|------------|------------------|---------------------|
| <b>Standard Loop</b> |                             |            |                  |                     |
| TS-2100              | 2 #14 CW                    | White      | 400              | 30                  |
| TS-2103              | 2 #12 CW<br>(or .083 Steel) | Yellow     | 400              | 30                  |
| TS-3100              | 2 #14 CW                    | Orange     | 500              | 30                  |
| <b>Elongated</b>     |                             |            |                  |                     |
| ETS-2104             | 2 #12 CW<br>(or .083 Steel) | Yellow     | 350              | 35                  |
| ETS-3101             | 2 #14 CW                    | Orange     | 400              | 34                  |
