COYOTE® 6-1/2” x 22” Dome for Flip Trays

Be sure to read and completely understand this procedure before applying product. Be sure to select the proper PREFORMED product before application.

NOMENCLATURE

1. Dome cover (1)
2. Organizer with 4-port end plate assembly (1)
3. Splice Tray (1)
4. Dome collar (1)
5. Dome gasket (1)
6. Cable grommet (2)
7. Hose clamp (4)
8. Silicone lubricant (4-five gram packets)
9. Disposable glove (1)
10. Strength member bracket (4)

TOOLS REQUIRED

• 3/8” & 7/16” can wrench or socket
• 1/4” nut driver or screwdriver
• Snips
• Fiber optic cable opening tools

**NOTE:** Grommet Kit contains (1) Grommet, (1) Cable Measure Tape, (2) Silicone Lubricant Packs, (1) Set of Plugs (Multi-Entry Grommets only)
End Plate Preparation

**Step #1a** Remove end plate from organizer assembly.

**Step #1b** Remove the end plate caps from the selected cable ports and break out the tabs.

**PLP Tip:** Scoring edges of tabs with knife makes them break out easier.

**Step #2** Optional Step
For better stability during cable installation and fiber splicing, install the end plate onto the COYOTE® Dome End Plate Fixture (see Steps 3a-b for installation details).

**Step #3a** Optional Step
Install support bracket onto base.

- Loosen wing nut so slotted tab of support bracket can slide behind wing nut.
- Position support bracket onto base and secure with wing nuts.

**Note:** Do not tighten wing nut until end plate is installed.

**Step #3b** Optional Step
Seat the end plate onto the cushion wedges and secure the support bracket to the stud of the end plate.
The outside surface of the end plate must rest against the support bracket.

**Support Bracket**

Hand tighten any loose wing nuts to secure end plate to fixture.

**Step #4** Lay cable into entry point and mark for grommet and sheath opening locations.

**Grommet location**

1.75” (45 mm)

**PLP Tip:** Hole in strength member bracket is a guide for sheath opening.
Step #5 Measure cable to determine diameter and hole location to use in grommet.

Step #6a If using cut cable, insert cable through grommet. If your application requires express/balloon/ring cut cables, see Step 7 for grommet slitting procedure.

Step #6b Installing Figure 8 Style Cables and Cables with Tracer Wires – Remove tracer wire or ground wire from the portion of the cable that will be positioned in the grommet and insert the cable into the grommet.

Step #7 Grommet Slitting – If slitting is required, lay grommet on a stable flat surface. Position utility knife with the cutting edge against the top surface and cut through grommet. Consult grommet chart on page 3 for slitting locations of all grommets.

PLP Tip: Use a pen to sketch slitting lines on top surface of grommet prior to cutting.

Step #8a Trim strength members to length. Prepare cable(s) for cut applications.

Buffer (Loose) Tube Cable

Step #8b Prepare cable(s) for mid sheath applications. (Express/Balloon/Ring Cut).

Buffer (Loose) Tube Cable

For Applications Where Fiber is Dedicated to the Splice Point

<table>
<thead>
<tr>
<th>Sheath Opening</th>
<th>82&quot; (2.1 m)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fiber/Buffer Tube Cut Location</td>
<td>A (see image above)</td>
</tr>
</tbody>
</table>
Step #8c  Prepare cable for expressed fiber (buffer tube window cut) applications.

For Applications Where Fiber is NOT Dedicated to the Splice Point

<table>
<thead>
<tr>
<th></th>
<th>Sheath Opening</th>
<th>Fiber/Buffer Tube Cut Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sheath Opening</td>
<td>164” (4.2 m)</td>

</tr>
</tbody>
</table>

Step #8d  Prepare cable for expressed fiber (buffer tube window cut) applications.

For Applications Where Fiber is Expressed through the Buffer Tube

<table>
<thead>
<tr>
<th></th>
<th>Sheath Opening</th>
<th>Fiber/Buffer Tube Opening Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sheath Opening</td>
<td>137” (3.5 m)</td>
<td>C (see image above)</td>
</tr>
</tbody>
</table>

Step #9  If shielded cable is being used, install shield connector on shielded cables. See Step #16 for recommended bonding practice.

Follow standard company practices.

Step #10a  Lubricate the outer surface of the grommet.

Step #10b  Position grommet in end plate slot.

IMPORTANT NOTE: For Wide Range 2-Hole Grommets, make sure arrows are pointing down when inserting grommet(s).

Do not align grommet slit with end plate seam.

Step #11  Install cable cap and secure with hex bolts. Tighten bolts by hand evenly until cable cap is fully seated. (DO NOT USE POWER TOOLS TO TIGHTEN BOLTS).

Important Note: For Flame Retardant Domes, do not exceed 20 in-lbs of torque when tightening bolts.

PLP Tip: To start cable cap bolts, apply pressure with thumb and line up bolts with inserts. Engage 1 or 2 threads on one of the bolts. Repeat the process on opposite bolt. Alternate tightening until fully seated.

Important Note: TIGHTEN ALL UNUSED CABLE CAPS.
Step #12  Complete end plate assembly.

Step #13  Secure organizer assembly to end plate.

Step #14  Install strength member brackets to studs and secure with nuts. Trim cable strength member(s) even with the edge of the cable restraint bracket. Secure strength member(s) and "KEVLAR® under clip and tighten screw.

Step #15  Secure cable sheath with hose clamp.

PLP Tip: Avoid contact between hose clamp and shield connector to maintain isolation of each cable ground.

Step #16  Attach bonding device between the cable and ground stud in the end plate and ground per your accepted company practice.

Step #17  Route and store buffer tubes in storage brackets.
**Step #18** Attach splice tray to organizer. Route buffer tubes to splice trays and secure.

**Note:**
Wrap felt tape around the buffer tubes in the area where they will be tied down to the splice tray.

**Step #19** Route incoming fibers and outgoing pigtails and splice per standard company practices.

**Step #20** Secure splice trays with strap.

**Dome Preparation & Installation**

**Step #21** Lubricate all surfaces around gasket with silicone lubricant to assure easy assembly and closure re-entry.

Lubricate all inner surfaces of the gasket.

Lubricate all outer surfaces of the gasket.

**Step #22** Slide end plate gasket onto end plate and press into groove.

**Note:**
Make sure gasket is seated in groove of end plate.

**Step #23** Re-tighten all cable cap bolts (step #11) to assure that the cable caps are fully seated.

**Step #24** Position dome over end plate.
Step #25  Install dome collar.

Step #26  COYOTE Universal Mounting Bracket for Hand Hole Applications. The COYOTE Dome closure can be installed in a hand hole using the COYOTE Universal Mounting Bracket (Cat. No. 8003835). Secure the Universal Mounting Bracket to the inner wall of the hand hole using 2 screws. Next, insert banding (plastic or metal) through the slots of the hanger brackets (Step 1) and position the brackets in the banding channels of the dome. Tighten the banding until the brackets are secure (Step 2). Lastly, slide the hanger brackets into the proper slots of the Universal Mounting Bracket and snap the hinged lid into place to secure the hanger brackets (Step 3).

Step #1

Step #2

Step #3
**Step #27a** Dome Aerial Mounting Bracket – Dome Mount – for 6.5” x 22” Dome Closures. The COYOTE Dome Mount Aerial Bracket Kit (Cat. No. 8003831) can be used to suspend the COYOTE Dome closure from the messenger wire. To install the dome, mount aerial brackets, position the brackets in the banding channels of the dome and insert banding (plastic or metal) through the slots of the brackets. Tighten the banding until the brackets are secure before mounting the closure to the messenger wire with the bug nuts of the brackets.

**Step #27b** 6.5” x 22” Dome Mount Aerial Bracket – Dome Mount – for ADSS. The COYOTE Dome Mount Aerial Bracket Kit for ADSS (Cat. No. 8003833) can be used to suspend the COYOTE 6.5” x 17” or 6.5” x 22” Dome closure from ADSS cable. To install the dome, mount aerial brackets, position the brackets in the banding channels of the dome and insert banding (plastic or metal) through the slots of the brackets. Tighten the banding until the brackets are secure before mounting the closure to the ADSS cable with the ADSS clamp.

**Step #28a** (For Standard 6.5” x 22” Domes) The COYOTE Dome Pole/Wall Mount Bracket (Cat. No. 8003702) can be used to secure the COYOTE Dome closure to wood, concrete, or steel poles. The COYOTE Dome Pole/Wall Mount Bracket can also be used in conjunction with the FIBERLIGN® Lattice Tower Clamp (Cat. No. 7000400) for lattice tower applications. Secure the stud mount bracket to the end plate studs of the dome and secure the stud mount bracket to the pole mount bracket. Attach the dome pole mount bracket to the pole with either 5/8” through bolts or 1/4” lag screws.
Step #28b (For Flame Retardant 6.5" x 22" Domes) When using a flame retardant dome closure, the Vertical Mount Stabilizer Bracket (Cat. No. 8003884) is needed to secure the COYOTE Flame Retardant Dome closure to wood, concrete, or steel poles in addition to the COYOTE Dome Pole/Wall Mount Bracket (Cat. No. 8003702). Secure the stud mount bracket to the end plate studs of the dome and secure the stud mount bracket to the pole mount bracket. Attach the banding bracket to the pole with 1/4" lag screws. Attach the dome pole mount bracket to the pole with either 5/8" through bolts or 1/4" lag screws. Secure the dome to the banding bracket using steel banding.

SAFETY CONSIDERATIONS

This application procedure is not intended to supersede any company construction or safety standards. This procedure is offered only to illustrate safe application for the individual. **FAILURE TO FOLLOW THESE PROCEDURES MAY RESULT IN PERSONAL INJURY OR DEATH.**

Do not modify this product under any circumstances.

This product is intended for use by trained technicians only. This product should not be used by anyone who is not familiar with, and not trained to use it.

When working in the area of energized lines, extra care should be taken to prevent accidental electrical contact.

For proper performance and personal safety, be sure to select the proper size PREFORMED™ product before application. PREFORMED products are precision devices. To insure proper performance, they should be stored in cartons under cover and handled carefully.
