### Step #1
Measure the cable to determine the diameter and hole location to use in the grommet.

### Step #2
If using cut cable, insert the cable through the grommet. If your application requires express/balloon/ring cut cables, see Step 3 for the grommet slitting procedure.

### Step #3
Grommet Slitting – If slitting is required, lay the grommet on a stable flat surface. Position the utility knife with the cutting edge against the top surface and cut through the grommet. Consult the grommet chart to the left for the slitting locations of all grommets.

---

**PLP Tip:** Use a pen to sketch the slitting lines on the top surface of grommet prior to cutting.

### Cable Preparation

SAFETY CONSIDERATIONS

This application procedure is not intended to supersede any company construction or safety standards. This procedure is offered only to illustrate safe application for the individual. **FAILURE TO FOLLOW THESE PROCEDURES MAY RESULT IN PERSONAL INJURY OR DEATH.**

Do not modify this product under any circumstances.

This product is intended for use by trained technicians only. **This product should not be used by anyone who is not familiar with, and not trained to use it.**

When working in the area of energized lines, extra care should be taken to prevent accidental electrical contact.

For proper performance and personal safety, be sure to select the proper size PREFORMED™ product before application.

PREFORMED products are precision devices. To insure proper performance, they should be stored in cartons under cover and handled carefully.
