

ARMADILLO™ Sealing Washer End Plates

ARMADILLO™

ARMADILLO™ Drillable End Plates

A Whole New Species for Copper Cable.

ARMADILLO Sealing Washer End Plates— Born Tough. Bred Smart.

With the introduction of the **ARMADILLO** Series, comes a new end plate design. The **ARMADILLO** Sealing Washer End Plate eliminates major tooling costs, field drilling and does not require extensive training.

The **ARMADILLO** Sealing Washer End Plate is your best choice when...

-  Your application does not require more than one, two or three cable entry ports;
-  No power source for field drilling is available;
-  Mastic sealing tapes are used that do not require C-Cement making these End Plates re-usable;
-  Maintaining 10 psi (68kPa) is acceptable.

Design Features:

These new end plates have no external fasteners, utilize the proven PREFORMED™ Torque Bar for positioning, and have universal inserts that enable grounding connections and air pressurization through the end plate. They also feature a unique strengthened, two-piece sealing washer that is available in the same sizes as competitive units and are interchangeable.
