

The new **CONPACT™** Connector; compact design, easy cable application,  
and simple installation in one connector.

## A clear cover, rounded-nose screws, and staggered conductor ports make the CONPACT™ Connector more field-friendly.

### Quality connections

Several design features make the new CONPACT Connector from Preformed Line Products distinctly different. The staggered conductor port spacing of the CONPACT Connector eases cable application. The compact design provides for increased clearance in padmounted transformer enclosures and reduces cantilever stress on the transformer stud.

Universal stud ports allow for application on both 1" and 5/8"

transformer studs.

The width of the conductor screw was designed to be the same as the width of the conductor port making it possible to keep strands of cable from riding up around the threads. The position of the locking set screw is closer to the end of the connector so it is easier to completely tighten the connector on the neutral stud which has two jamb nuts. These features make it possible to maintain a quality connection.

### Clear advantage

Clear covers are available for the CONPACT Connector. These sturdy covers provide for safety and durability in the field. The exceptional visibility afforded by the material allows crews to check conductors and assure proper installation. Being able to check positioning is important to detect loose connections.

### Sizes, and options to suit different needs

The CONPACT Connector comes in #10-350 MCM and #10-500 MCM versions with an optional encapsulated cover for dead-front applications.

Several different options can be ordered; connectors come with or without inhibitor, dual street light ports, or a clear cover.

Both CONPACT Connector designs have passed the requirements of the ANSI C119.4 standard.

### You can depend on PLP®

We have been committed to being a dependable supplier since 1947. The entire connector line is backed by laboratory and field test data. Moreover, our sales and engineering staff are committed to on-going research and development to further grow the Underground Power product line, and meet customer demands. Should you have a special request, or would like more information regarding our CONPACT Connector or other Underground Power Products, contact PLP today.

CONPACT™ Connector			
Catalog Number	Conductor Ports	Conductor Range	Length (inches)
CSC33-350Q	6	#10-350 MCM	4.6
CSC44-350Q	8	#10-350 MCM	5.6
CSC55-350Q	10	#10-350 MCM	6.5
CSC33-500Q	6	#10-500 MCM	5.1
CSC44-500Q	8	#10-500 MCM	6.3
CSC55-500Q	10	#10-500 MCM	7.4

Options: C = Clear Cover; I = Inhibitor; SL2 = Street Light Ports.  
Example: CSC33-350QCSL2I
