

An effective urethane system
for light rail transit applications.

Photo: Muni Light Rail Project, San Francisco, California

“440” Rail Grout offers superb protective qualities, ease of application, and can be formulated for your needs.

Make up

“440” Rail Grout 70A is a flexible grout used for absorbing vibration and insulating electrical energy. It is a two component, 100% solids, liquid applied modified urethane elastomer. Extremely effective for the undersealing of rails in light rail transit systems, it can also be used in a variety of construction, power distribution and military applications.

Ease of application

Application of “440” Rail Grout is simple, convenient and accurate. Simply mix the factory pre-weighed components and pour into the channel by the rail. It

can be applied to existing concrete surfaces or new concrete. In addition, it can be used on metal substrates.

Strict safety standards

Adhering to strict safety standards, “440” Rail Grout meets all requirements of California Proposition #65 Toxic Environment Act. In addition, it fulfills all chemical list requirements of the Environmental Protection Agency (EPA), National Toxicology, International Agency for Cancer Research and Occupational Safety Health Administration (OSHA).

In addition, rigid quality control standards are followed to assure customers of consistent product quality.

Custom formulation

“440” Rail Grout offers aesthetic benefits as well. We have the ability to customize the compound to your specific application requirements. Let us know your application and we will work with you to best meet your needs.

Support and experience

Preformed Line Products' Urethane Division is backed by 50 years of superior product performance and exceptional customer service. Our experienced research and engineering group is structured to provide technical support at all phases of the project. The manufacturing facility is one of the largest of its type in the world, utilizing state-of-the-art chemical compounding technology.

For more information on “440” Rail Grout and other urethane compounds, contact Preformed Line Products today.

Features		Benefits
100% solids, liquid applied urethane elastomer	→	Easy, accurate application
Insulates against electrical energy	→	Prevents stray current problems
Absorbs vibration	→	Smoother ride, minimizes track wear
Custom formulations available	→	Meets specific application requirements
Follows chemical list requirements	→	Strict safety standards
